

Built to withstand the harshest extremes.

Hydraulic machinery often has to operate in the most treacherous environments. And if your piston and rod seals aren't up to the job then you could be looking at lengthy and expensive delays. The Turcon Stepseal 2K has been created to withstand temperatures as low as -45C and as high as 200C. And with its patented profile it's able to dramatically reduce both extrusion and leakage. Increasing the efficiency and durability of your machinery.
